RFC: Deterministic Rendering Pipeline

Problem Statement

Different tools render markdown with inconsistent behavior around math, diagrams, and syntax highlighting.

This pack emphasizes technical readability and stable code/table rendering for specification documents.

Interface Contract

| Input | Normalization | Output |
|-----------------|------------------------------|------------------------------|
| Markdown | Frontmatter + token pipeline | HTML/PDF |
| Relative assets | Base URL injection | Correctly resolved resources |
| TOC metadata | Depth clamping | Predictable nav tree |

Operator Shortcuts

Use `Ctrl` + `C` to stop watch mode safely.

Do not bypass cleanup hooks in long-running conversion sessions.
