Callouts and Alerts

This example focuses on blockquote-based callout syntax from Obsidian and GitHub.

GitHub Alerts

Note
This is a note alert.

Tip
Prefer relative links for local docs like Guide.

Important
Important alert with **inline formatting** and `code`.

Warning
Warning alert with multiple lines.
Keep this in mind before publishing.

Caution
Caution alert with a short checklist:

- verify inputs
- validate output

Obsidian Callouts

> **Info**
> Obsidian info callout (lowercase type).

> **Summary**
> Custom title after the callout type.

> **Expanded by default**
> + is accepted and treated as expanded.

> **Collapsed marker demo**
> - is recognized and attached as a collapsed semantic marker.

> **Parser edge case**
> Nested markdown still works:
>
> 1. list item
> 2. another item
>
> Final paragraph in the same callout.

Fallback Behavior

These are regular blockquotes and should remain regular blockquotes:

> [! not a valid callout header
> so this should not become a callout.

> Plain blockquote.
